## AIRPORT ECONOMIC IMPACT STUDY

The Nevada Airport Economic Impact Study (AEIS) evaluated the economic impacts of all system airports in Nevada. The components that comprise the total economic impact of Nevada's aviation system and the economic impact of 0L7 are presented below. These components include on-airport direct impacts as well as multiplier impacts generated throughout Nevada through re-spending and supplier purchases. Visit the NDOT website to learn more about the methodology used to determine the statewide and airport-specific economic impacts.

# **AIRPORT OVERVIEW**

Jean Airport, also known as Jean Sport Aviation Center, (0L7) is a general aviation (GA) airport located less than 30 miles from Las Vegas, in Clark County. The facility is owned and operated by Clark County Department of Aviation. 0L7 has two paved runways that are 4,600 and 3,700 feet long. Operations are recreational in nature and include skydiving, gliders, aerobatic practice, and other related aviation activities such as flight training. An aerobatic practice box is located two miles west of the field which is used by individual pilots and aerobatic clubs/teams. In addition, a small number of aerial firefighting operations are supported as well as occasional air taxi operations.

# **AIRPORT REPLACEMENT VALUE**

Airports generate economic impacts from their operation, but also have tremendous value as a physical asset. Airports are comprised of large tracts of land, sometimes miles of pavement, and numerous buildings that have substantial value, especially in terms of replacement. Replacement value was estimated based on existing facilities and current costs.

## **OL7 INVESTMENT NEEDS**

NAHSP Estimated Project Costs were developed by summing the estimated costs of project recommendations from the NAHSP ARV and PM analysis. Airside needs include runway, taxiway, apron, NAVAIDS and lighting; landside needs include fuel, hangars, and ground transportation; pavement maintenance includes runway, taxiway, and apron pavement rehabilitation projects; planning needs include projects such as airport layout plans, master plans, and environmental assessments; terminal needs include items such as new buildings, wayfinding, restrooms, escalators, and concourses. Costs were developed as planning level estimates only and do not include the level of detail needed to design projects or prepare grants.

Airport Estimated Development Costs were sourced from each Airport's Capital Improvement Plan (ACIP), as well as other costs from Master Plans and other studies provided by the airports. ACIPs are developed by airport sponsors and consultants to plan for capital improvement needs over the planning horizon.

# Nevada Aviation: A Vital, Growing Resource

# JEAN AIRPORT OL7

The 2022 Nevada Airport and Heliport System Plan (NAHSP) and Airport Economic Impact Study (AEIS) are critical documents to the Nevada Department of Transportation (NDOT) Aviation Program. Combined, these are used to provide guidance and direction on how to maintain the aviation system, monitor performance, and invest in the future.

#### **NAHSP Process:**

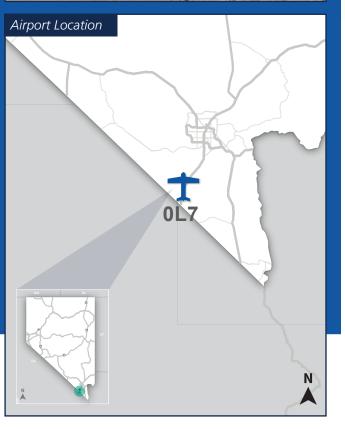

- Monitor aviation system performance
- Provide guidance and direction to maintain the aviation system
- Provide justification for continued investment in the aviation system

#### NAHSP Roles:

- Seven functional classifications used in the NAHSP
- Mix of Federal Aviation Administration (FAA) National Plan of Integration Airport Systems (NPIAS) and unique NAHSP roles
- OL7 is classified by the NAHSP as a General Airport and in the NPIAS as a Basic Airport

**General:** Serve a variety of general aviation (GA) activities, support local economies, and provide basic aeronautical needs.

# **AIRPORT REGIONAL VALUE**

The Airport Regional Value (ARV) measures the economic, social, environmental, emergency, and facility metrics associated with each airport. ARV results can inform airports about the impact and

benefit of specific capital improvements and demonstrates the tie between airport investment and economic impact. There are three components of ARV: economic impact, replacement value, and value rating variables (VRV). Economic impact and replacement value are featured on the back page of this brochure while the results of the VRV analysis, presented as an Airport Development Report, are presented in the centerfold.

# **JEAN AIRPORT**

This Individual Airport Report presents the results of the Value Rating Variable (VRV) analysis that was conducted as part of the Airport Regional Value (ARV) assessment. More information regarding the ARV methodology is included in Chapter 5. Airport Regional Value (ARV) Methodology. The information in this table can be used by airports to identify opportunities to improve their airport, with the scores indicating where deficiencies may exist. As airports complete improvement projects, they can see their ARV score increase, allowing airports to track their progress over time and understand how their facility compares to other facilities within their NAHSP role.

Ca	tegory	Value Rating Variable (VRV)	NAHSP Objective (Minimum)	Current Performance	Score
	Regional Significance V <sub>RS</sub>	Airport Ownership	N/A	Public	5
		Airport Uses	N/A	EMS, Fire -Temporary, Skydiving, and Gliders	4
		Nearest Airport	N/A	18 Miles	2
		Longest Runway	Accommodate 95% of Small Aircraft Fleet = 6,200 Feet	4,600 Feet	0
